Visual Design
Graphic Design
Branding
Typography
UI/UX Design
Interaction Design
Wireframing
Prototyping
Information architecture
User Research
Usability Testing

EDUCATION

B.S. & M.S in Biology
Novosibirsk State
University, Russia
2013 – 2019

I come from a wild combination of graphic design and science. Through my work as **graphic designer** I gained proficiency in industry-standard design tools and a passion for creating meaningful designs. A **scientific background** equipped me with a strong analytical mind and user-centric approach. My experience crafting pixel-perfect visuals for complex data perfectly translates into creating intuitive user experiences.

EXPERIENCE

Freelance Graphic Designer

2020– present

Helped out local businesses and non-profits with eye-catching flyers, banners, logos, and illustrative materials. Made sure their message cut through the noise and grabbed people's attention. A logo and banner I created for a local music studio for children helped them significantly increase their client base.

Research Assistant

University of Texas at Austin

2019 – 2023

Using industry standard design tools crafted visually appealing posters, figure layouts for publications, and other visual aid materials. To translate scientific data into meaningful visuals, I conducted user research to make sure my data is clear to people from different backgrounds and fields. Presented my teams' data at conferences and presentations, successfully communicating complex details of our research.
